PROFESSIONAL SUMMARY

IT graduate specializing in mobile and web development with practical experience from internships and student capstone projects. I work across the entire stack, from building clean user interfaces to managing databases and back-end logic. Always looking to expand my skill set and find new ways to integrate AI and IoT into my projects

SKILLS

- **Languages:** JavaScript, Python, PHP, Java
- **Frameworks:** React, React Native, Node.js, Express.js, Bootstrap, Tailwind CSS
- **Databases:** Firebase, MySQL, PostgreSQL, MongoDB, SQLite
- **Tools:** Git, Github, Visual Studio Code, Android Studio, Figma, Firebase Console, npm, Expo, Jira

EDUCATION

National University - Fairview

August 2026

Bachelor of Science in Information Technology – 3.8 GPA

EXPERIENCES

MySchool

Philippines (Remote)

AI Developer Intern

March 2026 – June 2026

- Deployed OpenClaw agentic frameworks and engineered custom, scratch-built API tool integrations (skills) for X (Twitter) and Jira to automate complex workflows tailored to executive requirements.
- Architected an AI backend for a high-traffic fan engagement platform, enabling real-time WebSocket communication, Gemini Flash Live voice interactions, and dynamic AI persona generation through onboarding pipelines.

QE360

Philippines (Remote)

Junior QA Engineer Intern

November 2025 – February 2026

- Conducted agile and exploratory testing for web and mobile applications, identifying critical bugs, documenting technical reports, and collaborating with developers to improve system quality.
- Verified UI/UX implementation using Figma mockups and developed a Google Sheets API integration to create a dynamic data pipeline between spreadsheets and application features.

PROJECTS

Pasada - Mobile Booking & Delivery Application

- Acted as the primary front-end and secondary back-end developer to build a responsive mobile booking and delivery application.
- Designed user-friendly mobile interfaces and connected them to secure databases to manage real-time user bookings and delivery tracking data.

Synop - Keeping Things In Order

- Built a cross-platform personal inventory management app with React Native, Expo, TypeScript, and SQLite for tracking belongings across rooms, containers, and item categories
- Designed core workflows for lending, outside-session packing checklists, barcode/QR scanning, photo-based item records, warranty reminders, and voice-controlled item actions.

Kasulatan

- Developed a full-stack digital agreement platform where users can create, review, sign, and finalize private transaction agreements online.
- Implemented authentication, Prisma/PostgreSQL database models, e-signature validation, audit logs, and PDF agreement summaries using Next.js and TypeScript.

Galactic Grid – Tic-Tac-Toe Game

- Developed a school project, Galactic Grid – Tic-Tac-Toe Game, using HTML, CSS, JavaScript, PHP, and MySQL, featuring an expanded game board, interactive gameplay, a computer-controlled opponent with custom game logic, and database integration for game functionality.

CERTIFICATES

Excellence for Best TikTakToe Game.
